Filters, Regulators and Lubricators

Accessories

Pneumatic equipment requires a clean, controlled air supply to work at the highest efficiency. Alemite Compressed Air Components help ensure that your Alemite lubrication systems operate at a high standard, with minimal down time for repair due to poor air quality.

SECTION TWELVE

COMPRESSED AIR COMPONENTS

FILTERS, REGULATORS AND LUBRICATORS

Alemite Compressed Air Components allow you to accurately and reliably regulate, clean, dry and lubricate the air going into your system. These high quality components improve productivity by reducing the risk of down time due to poor quality air supply. Alemite offers a variety of packages and individual filters, gauges, regulators and lubricators, allowing you to choose the best option to meet your need.

Filter and Regulator Packages

Alemite Filter and Regulator Packages include the filter, moisture separator with auto drain, air regulator and air gauge, along with required connecting hardware.

OIL-MIST SYSTEM COMPONENTS

Application Reclassifier Fittings

Reclassifier fittings perform two critical functions:

- They maintain consistent system mist pressure for all lubrication points
- They deliver a measured amount of mist flow to each point, as determined by their orifice size

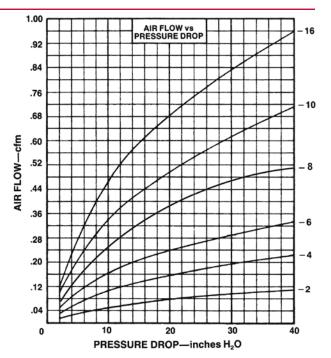

Every lubrication point requires a reclassifier fitting.

Since oil-mist can be applied to a wide array of machine elements (bearings, gears, chains, etc), Alemite offers four different types of fittings. Each type provides a different degree of reclassification of the dry mist into a suitable degree of wetness to adequately lubricate the element.

Mist Fittings

Primarily used for enclosed bearing housings and rely on the bearing velocity to provide the reclassifying function. They are used on both pure mist and purge mist applications. Brass fittings have black zinc finish.

Application Reclassifier Fittings

Spray Fittings

Compared with mist fittings, spray fittings convert a greater percentage of mist into a wetter spray. Primarily used to lubricate chain, gear teeth and slow-moving equipment. Can also be used to apply a thin oil film on surfaces. Chiselpoint tip should be located within ½" to 1" of surface to be lubricated. Fittings have black zinc finish.

These fittings convert mist into liquid oil within the fitting itself. The condensed oil flows by gravity to the machine element. Fittings are made of brass with a bright zinc finish.

Spray Nozzle Fittings

Like spray fittings, spray nozzle fittings convert mist into a wetter spray. Whenever the required mist flow exceeds the capacity of the maximum spray fitting size, spray nozzle fittings are used. Spray nozzle fittings contain from 1 to 14 flow holes. Each hole passes the same amount of mist as the largest spray fitting. Oneend threaded fittings (not shown) are usually installed from inside a very large bearing housing and have a tightening slot on the opposite end. Fittings are brass.

Pump Performance Curves

Alemite performance charts are offered to aid in the selection of appropriate products for your applications. These charts depict expected product performance under real world flow rate and pressure conditions.

PUMP PERFORMANCE CURVES

Alemite has a pump to meet virtually every industry application. To find the right pumps for your operation, check the performance capabilities using the performance curves within this section.

Material Discharge Pressure:

To find material discharge pressure (psi) at a specific delivery (GPM) and air pressure (psi):

- 1. Locate required delivery along bottom of scale.
- 2. Follow vertical line up to where it intersects with air pressure curve (solid line).
- 3. Follow line horizontally to the left column of chart to determine discharge pressure.

Air Consumption:

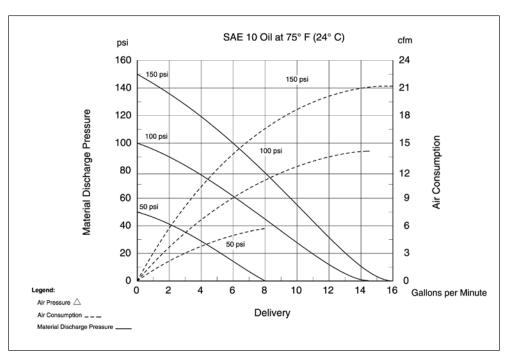

To find air consumption (CFM) at a specific delivery (GPM) and air pressure (psi):

- 1. Locate required delivery along bottom of scale.
- 2. Follow vertical line up to where it intersects with air pressure curve (dashed line).
- 3. Follow line horizontally to the right column of chart to determine air consumption.
