

Tank Liquid Level Gauge Breather System

The Most Effective Way To Visually Determine Quantity Of Tank Contents And Control Contamination

Retrofit Spectrum Bulk Oil Storage System tanks or other bulk storage tanks with Trico's Tank Liquid Level Gauge Breather System. Easily check the fluid level of a tank at a glance with the Tank Liquid Level Gauge Breather System. The unique design includes a top connector fitting for a desiccant breather or breather manifold system. With the installation of a desiccant breather or breather manifold system, the Tank Liquid Level Gauge Breather System is used to control outside contamination while allowing the tank to naturally breathe due to heating, cooling and fluid volume changes caused by temperature fluctuations.

Selection Chart:

P/N	Description
14-00228	Tank Liquid Level Gauge Breather System

Features:

- Allows tanks and drums to breathe clean filtered air from the top of the tank and not burp from the spigot
- Guarded, impact resistance Borosilicate Glass (Pyrex) able to handle high heat without breakage and vibration
- Nickel plated brass design does not produce sparks
- Eliminates the need for both a Liquid Level Gauge and a tank or drum breather
- Tank fittings include gaskets eliminating the need for messy pipe sealant
- Viton seals for all wetted parts
- Fully sealed design fitted to accept desiccant breather or breather manifold systems with 1/2" NPTF connection.
